EVENTENA(Event management system)

ABSTRACT

Eventena is a software project that serves the functionality of an event manager. The project provides most of the basic functionality required for an event. The system allows only registered users to login and new users are allowed to register on the application. It allows the user to select event type from a list of events. Once the user enters an event type (example Birth Day, Anniversary etc) the system then allows the user to select the date and time of event, place and the event equipment's. Event Planners (example Catering services, Decorations ,Venue etc) provides their services as packages. The total cost for services provided by event planners can be easily estimated. Thus the user can manage their events based on their budgets.

EXISTING SYSTEM

In the existing system, there is a lot of paper work; it is very time consuming and uneconomical as most of the works include manual processing. The records are difficult to store in manual system, and it requires more manual labour work.

PROPOSED SYSTEM

In the proposed event management system, everything is web-based. This will immediately reduce the manual processing, thereby increasing the speed of event management process. There are various functions and modules in the system to perform various features. This overall increase management productivity, eliminate paper works, reduce manpower, and prove to be very economical in the long run.

ADVANTAGES

- The system is useful as it calculates an exact cost for all the resources required during the event.
- The user gets all the resources at a single place instead of wandering around for these.

- This system is effective and saves time and cost of the users.

MODULES

- Admin module
 - View all details of users
 - Approve or reject registered venue, decorations and equipment.
 - Approve or reject booking of events
- User module
 - Login using username and password
 - Select event type and book event
 - View available venue, equipment and its price.
 - User can book events
- Event Planner module
 - Register details with system
 - Admin verify details and approved it.
 - view details of booking

MAIN PROJECT

Wedding Event Management

- Provides Video, Beautician, transportation, Venue, catering and decoration services.
- Provide packages based on their budgets.
- User can select suitable packages
- Online payments

Funeral Event Management

- Provides services like light and sound, parking, Transportation, Awning etc.
- Online payments.

Open stage functions

- Provides services like light and sound, parking, Awning etc.
- Online payments.

Conference Programs

- Provides Seating arrangement, Light and sound, Parking, catering services
